CASE STUDY

A RACE AGAINST TIME – AMCO DELIVER TIME-CRITICAL PARTS TO PREVENT AUTOMOTIVE PRODUCTION DOWNTIME!

THE CUSTOMER

Our client is a global luxury automotive leader known for world-renowned vehicles and cutting-edge technology.

As an industry leader, their sophisticated production relies on timely component delivery.

Any disruption causes a ripple effect, impacting both production schedules and market demand.

THE CHALLENGE

An urgent situation confronted our client. Their Midlands UK facility required **144** boxes of essential production parts before **12:00** the next day.

The parts were critical for maintaining their production line, and any delays would lead to significant downtime, incurring substantial financial losses. "Prevent Production Downtime" was the mission!

The parts were located in **Kardzali, Bulgaria**. Collection was scheduled for **22:00** that night. Time was extremely tight!

Initial attempts to secure a charter flight for the shipment failed due to logistical limitations at the airport.

AMCO faced the challenge of finding a reliable, innovative alternative to ensure delivery within the limited window.

THE SOLUTION

Faced with the limitations of air freight, we collaborated closely with the supplier to rethink our approach. We repackaged the palletised cargo into **144** individual boxes as the first step, making it feasible for hand-carrying by multiple couriers.

In record time, we assembled a team of **14** couriers, each responsible for transporting a portion of the shipment. We booked all 14 couriers onto a late-night flight from **Sofia, Bulgaria**, to Luton airport in the UK.

The couriers accompanied the entire shipment throughout the journey. Upon arrival at **Luton** airport early the next morning, the couriers efficiently navigated customs to avoid any potential delays.

From Luton, we transported the boxes by ground directly to the client's facility in the **Midlands**. We kept the time-critical shipment on track to prevent production downtime.

THE RESULT

By 12:00 the next day, all 144 boxes were delivered on time, allowing our client's production line to continue without interruption.

The swift response and seamless execution of this complex operation not only met the urgent deadline but also showcased AMCO's ability to pivot quickly and find creative solutions in high-pressure situations.

Our innovative approach prevented costly downtime for the client and reinforced our commitment to delivering critical shipments without compromise. This is testament to our agility, resourcefulness, and dedication to meeting our clients' most urgent needs, even under the tightest deadlines.
